

Anning Science Week

I liked planting the leeks. I hope we can taste it once they are grown!

We went on a nature scavenger hunt to see what natural items we could find in our own school grounds.

I loved running around collecting objects from the list!

We helped prepare some raised beds for planting later in the week. We learned about food miles and how it's better for the planet to grow our own food if we can.

We tried out the Racing Rockets activity from the CREST awards. We wanted to see which designs would go the furthest.

My rocket went really far!

The Fizz Pop workshop was amazing!

We had a workshop run by Fizz Pop.

It was about electricity and the way electrons can behave.

It was hair raising!
