

Science Week

We started the week discussing our Scientist and recapping why 'Rosalind Franklin' was important to Science. We then created a paper mache model of her head which will be displayed in the marketplace.

We then worked with the Mayflower 400 team exploring our local environment. We created a map of Southway using recycled materials and paints. Later, we explored what 'Southway' looked like and how it had changed over the years. We looked at different animals found in our local nature reserve and created images of trees in our local environment..

We also spent time planting kale. We will be looking after this until the summer to ensure it grows. We learned all about making sure we eat food that is locally produced as much as possible.
